Thaís do Nascimento Lima

Backend Software Engineer | Python • FastAPI • Celery • Flask •
MongoDB • SQL | Distributed systems | scalable APIs | Integrations
Fortaleza, Ceará, Brazil

Summary

Backend Software Engineer with over 5 years of experience designing and building scalable backend systems, enterprise integration platforms, and high-performance APIs using Python. I have contributed to software architecture decisions, modernization initiatives, performance optimization, and production reliability, working with technologies such as FastAPI, Flask, Celery, RabbitMQ, PostgreSQL, MongoDB, Docker, Kubernetes, and GitLab CI/CD. Beyond building scalable backend systems, I enjoy understanding the business problem behind every feature, collaborating across teams, and delivering solutions that create measurable value for customers. I'm recognized for quickly learning new technologies, taking ownership of complex engineering challenges, and continuously improving the systems and processes around me. Tech stack includes Python, FastAPI, Flask, PostgreSQL, Docker, Celery, SQLAlchemy, Kubernetes, MongoDB. Currently interested in backend engineering and distributed systems opportunities.

Experience

Santander Brasil

Mid level backend engineer

December 2024 - Present (1 year 9 months)

- Rewrote a legacy Flask and outdated Python service into FastAPI + Pydantic using Python 3.12
- Identified performance bottlenecks and optimized database queries in the "Reports" module of our project, significantly reducing latency and CPU usage
- Detected a major bottleneck and optimized the CI/CD pipeline of one of the project's services, reducing execution time from 45 minutes to 7 minutes, which accelerated development cycles

- Introduced UV as package manager and led the upgrade of dependencies and Python version (3.9 → 3.12), improving performance, maintainability, and development workflow
- Developed new features and resolved bugs across multiple services

Pontotel

3 years 9 months

Mid Level Software Engineer II

February 2024 - December 2024 (11 months)

Led the design and implementation of scalable integrations with external client systems. Defined architecture patterns and ensured reliability across multiple integrations. Designed, developed, and maintained critical REST APIs integral to these integrations. Main technologies: Flask, FastAPI, MongoDB, and PostgreSQL. Applied Domain-Driven Design (DDD) practices and an event-driven architecture to build modular services and support scalable integrations.

Mid Level Software Engineer I

January 2023 - February 2024 (1 year 2 months)

Junior Software Engineer IV

July 2022 - January 2023 (7 months)

Junior Software Engineer III

January 2022 - July 2022 (7 months)

Junior Software Engineer I

April 2021 - January 2022 (10 months)

- Led the design and implementation of scalable integrations with external client systems
- Defined architecture patterns and ensured reliability across multiple integrations
- Designed, developed, and maintained critical REST APIs integral to these integrations
- Main technologies: Flask, FastAPI, MongoDB, and PostgreSQL
- Applied Domain-Driven Design (DDD) practices and an event-driven architecture to build modular services and support scalable integrations

GREat

Intern

November 2019 - January 2020 (3 months)

Fortaleza e Região

Structured and componentized the initial setup of the project, contributing to the implementation of key screens. Focus on Front End development using JavaScript and React.

LSBD - UFC

Intern

February 2019 - August 2019 (7 months)

Fortaleza e Região

- Assisted in Back End development of a JavaScript and NodeJs project
- Developed small features and resolved bugs

Education

Universidade Federal do Ceará

Bachelor's Degree, Computational Science · (2016 - 2020)
